PORTFOLIO RISK FACTORS

AI-generated risk factor analysis based on the active snapshot.

- Termination Risk: 3 offices breach the 200% HUD compare-ratio threshold with >100 loans.
- Wholesale channel runs DPA concentration much higher than retail - primary CR driver.
- DPA loans delinquent at ~2.4x the rate of Standard FHA.
- Boost program removals reduce 6 of 8 termination-risk offices below 200%.
- LTV >95% bucket carries the highest delinquency rate.
- Honolulu and Buffalo register extreme CRs on small samples.
- Manual underwriting contributes disproportionately to seriously-delinquent loans.
- HUD field offices retain authority to suspend underwriting at >200%.

HUD Enforcement: Each HUD field office can independently suspend lender underwriting authority when the compare ratio exceeds 200%.

Legend: SDQ% = Seriously Delinquent %, CR = Compare Ratio, Rev = Revised (post-EG removal), R = Retail, WS = Wholesale, Tot = Total. Boost columns show DPA-Boost loans removed by EG logic.
* Cell value of 0% with nonzero delinquencies - either all DLQ loans were removed by EG-eligible adjustments, or no comparable HUD-area peer pool was available for the CR calculation.
